**“MyTask Agent Tools” Would Like to Use Your Current Location.**

**“Mytask Agent Tools” Would Like Send You Push Notifications**

Notifications may include alerts, sounds, and icon badges. These can be configured in Settings.

WELCOME TO MYTASK  
AGENT TOOLS

Please log in to get started

AGENT ID

PASSWORD

[Forgot your Password?](#)

*Don't have an ID? No problem.  
Register to become an Agent  
and you'll be on your way.*

# APPROVED

- The User will be asked to allow the app to use their location for the maps and photo location stamping. If they don't allow this they will be able to change it in the system preferences later.
- They will then be asked to allow Push Notifications. These are less important than location, but will be useful to notify users when a new urgent task is available or some other out-of-app message.
- These messages are generated by iOS
- The User will be required to sign-in in order to use the app. If they do not have an account they can register to be an Agent through the registration link.
- Unless they log out of their account (in settings), the User will only need to do this once and will never see this screen again.

iPhone 4/4S

iPhone 5

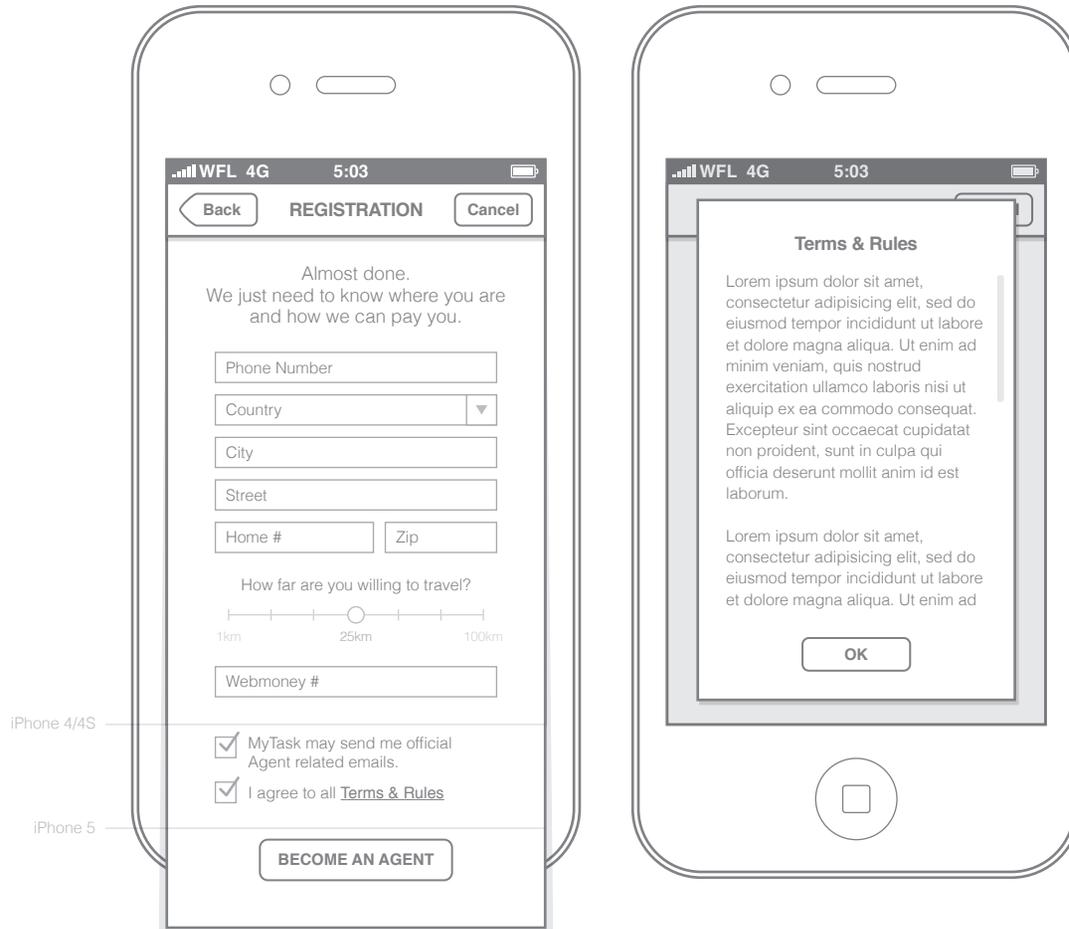

# APPROVED

- If the User is not already a registered Agent then they can become so on this screen.
- The User can choose to register via a social network account or to create a login from scratch.
- If they choose the social network then they will be taken to a 3rd party system to gather the necessary information. They will then be taken to the second registration screen.
- All fields (except the birth date) will be basic text inputs and bring up the keyboard.
- Birth dates will use the system date picker input
- Only basic info will be asked for on the first (of two) registration screens.
- The user taps 'Continue' to move on.

# WIREFRAMES

## REGISTER: CONTACT / TERMS & RULES

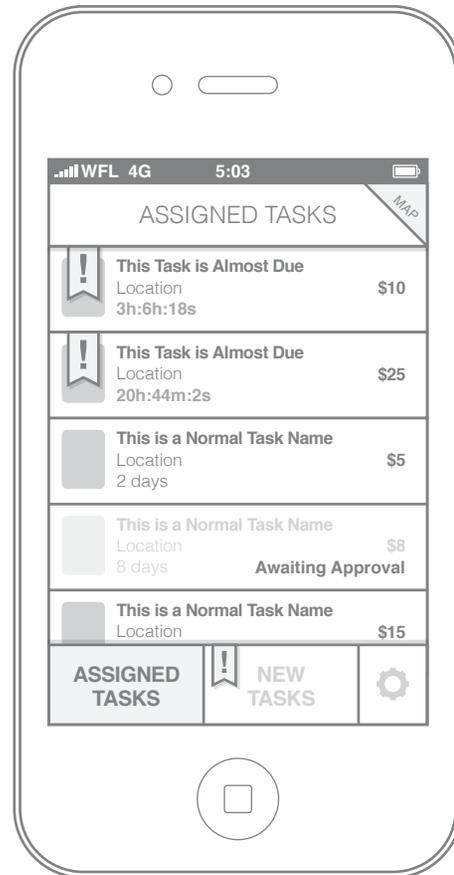

# APPROVED

- The second registration screen will ask for location information, phone number and their webmoney account number.
- If the User has registered via a social media account then the fields will be pre-populated when possible.
- Field inputs will be tailored to needed information. (eg. Phone number and Zip only need number keypad, Country is a drop-down, etc.)
- The distance slider will allow the user to choose between 1, 5, 10, 25, 50, 75 and 100km. The slider will lock into those choices only.
- The box for getting emails will be checked by default.
- The box for Terms & Rules will be unchecked by default.
- For those Users who actually read about what they are getting into before checking a box, there will be an overlay screen with the terms & rules.

# WIREFRAMES

## ASSIGNED TASKS: LIST VIEW

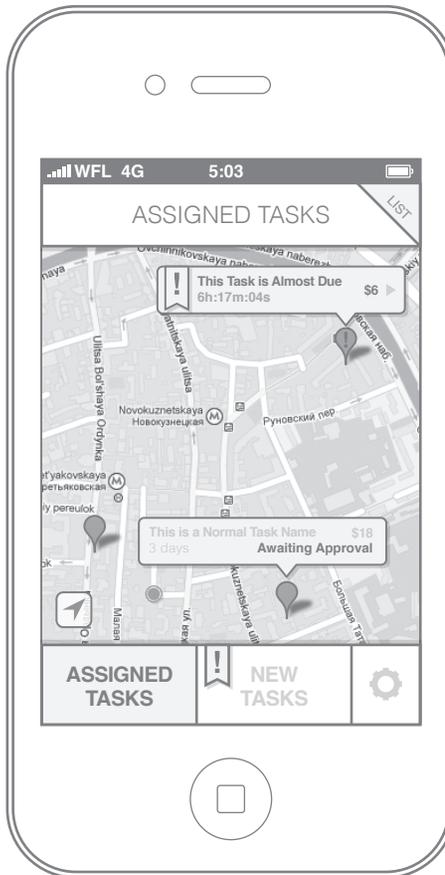

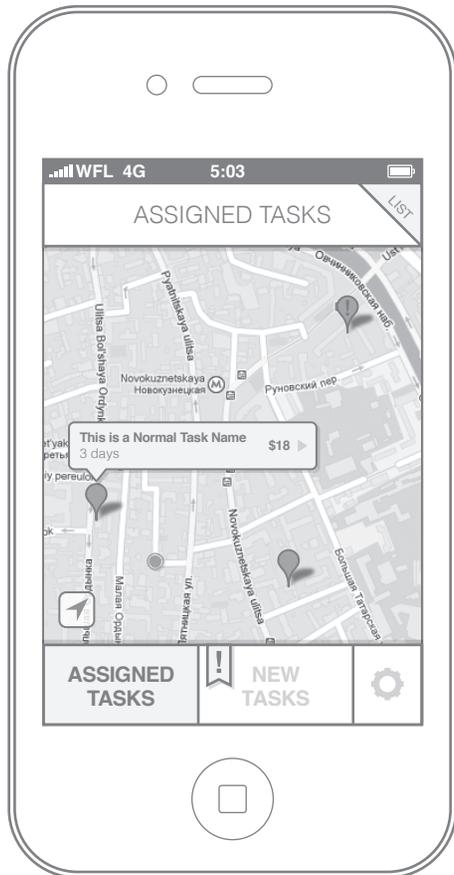

# APPROVED

- After the User signs in, they will be taken to this screen. It is also where the app will open to whenever it is closed through the OS
- The User can switch between list and map views.
- The entire block for each task in the list will trigger a slide over to either the full task details page or task center
- Task Type will be distinguished by an icon (gray box to left of task name)
- The Location name will not be a link to a full-screen map on this screen.
- Tasks that are within 2 days of their due date will be marked Urgent.
- The time is always in countdown mode. For Urgent tasks it shows hour:minute:second. For everything else it is just how many days are left.
- If the User is on any\* other screen and an Assigned Task becomes urgent than an urgent notification will appear over the Assigned Task area of the main navigation (similar to how New Tasks is in this wire). Once the User enters the Assigned Tasks screen the notification will be removed
  - \* The exception to this rule would be if the User is already on a screen associate with the urgent task
- If the User had claimed a task that requires the organizer's approval then the task will appear on this list, but will be greyed out and marked as Awaiting Approval.
- Tasks awaiting approval are not live so tapping on them will not do anything.

# WIREFRAMES

## ASSIGNED TASKS: MAP VIEW

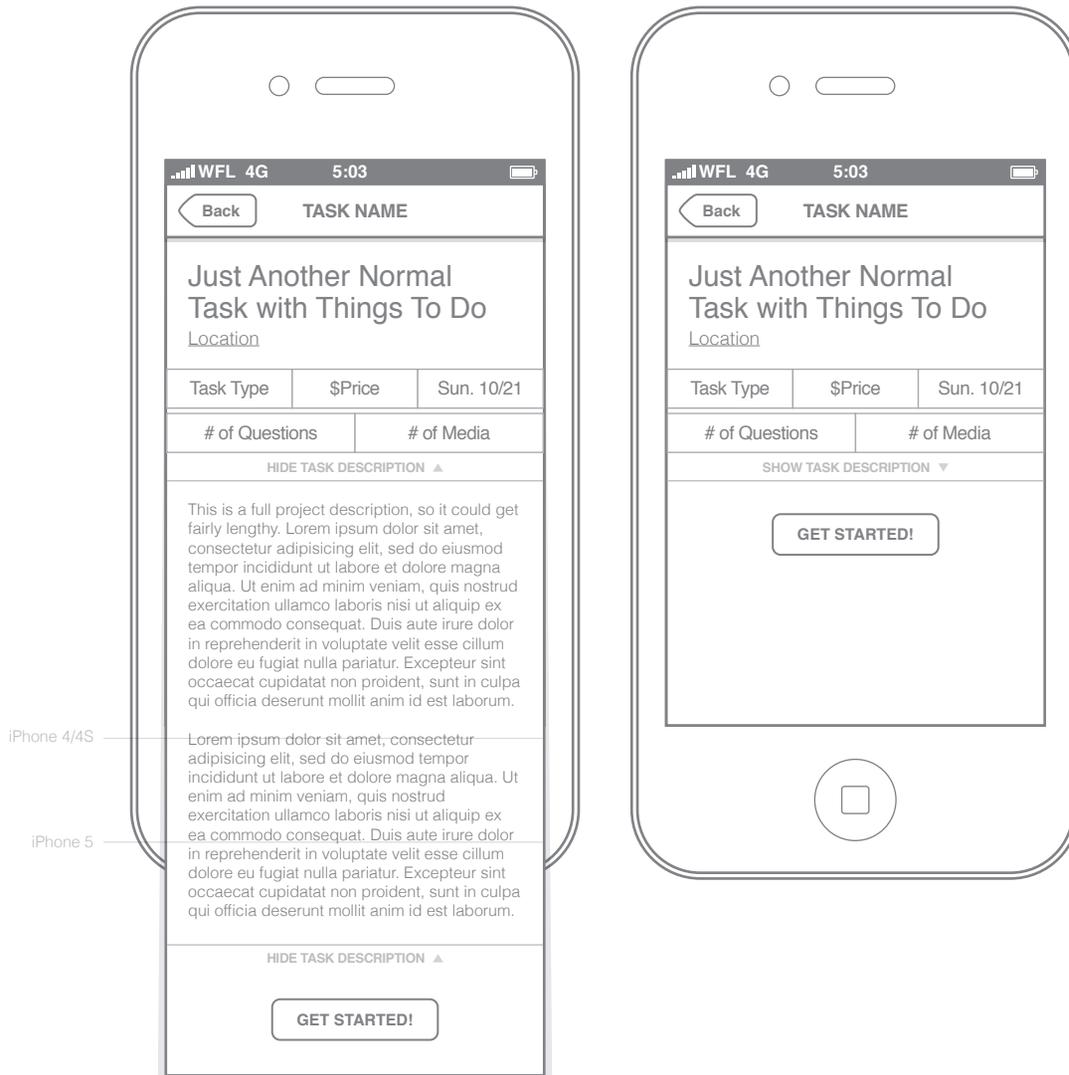

# APPROVED

- When the User taps on 'Map' they will be taken to this screen.
- Tapping on pins brings up more information for that location
- Tapping on the arrow will trigger a slide over to either the full task details page or task center.
- Tasks that are within 2 days of their due date will be marked Urgent in their info box. They will also get a special pin.
- The map will function like a system map. The User can pan by swiping, zoom by pinching and spreading, and tapping the compass icon will show the User's current location, etc.
- Tasks awaiting approval will be greyed out and marked in map view as well.

# WIREFRAMES

## FULL TASK DETAILS

# APPROVED

- Until the User officially starts the task (by successfully taking the mini quiz or just hitting the 'get started' button) they will be taken to the full task details page instead of the task center.
- The Location is now a live link that will take them to a full-screen map of the address
- Because the full task description can be very long the user will have the option to hide or show it. (Collapsed version on right).
- If the organizer has selected for a mini quiz then the User will be taken to that screen.
- If they haven't, then they will be taken straight to the Task Center

# WIREFRAMES

## MAP

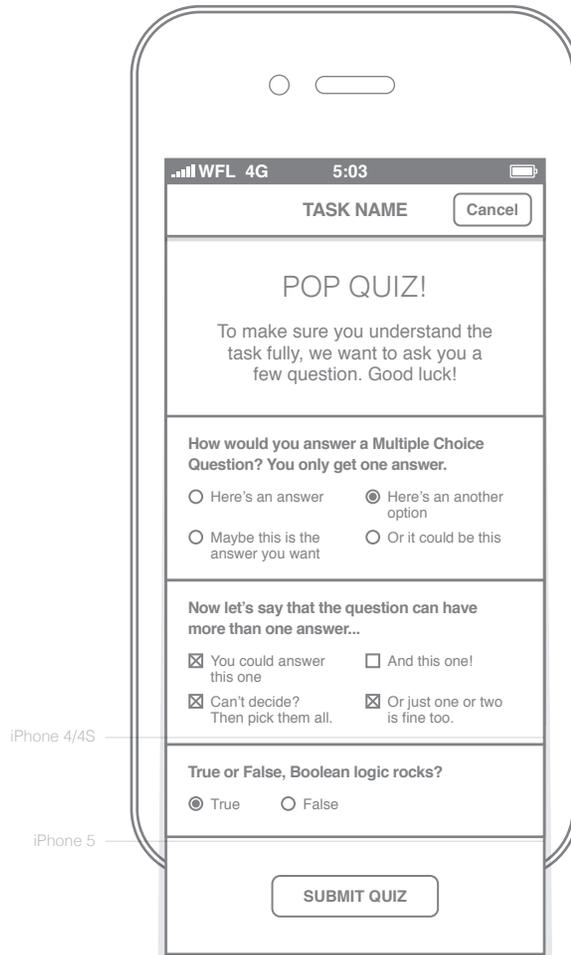

# APPROVED

- The map will be full screen and hide navigation and the status bar at the top.
- It will open centered on the address, but will have zooming, panning and location tracking capabilities

# WIREFRAMES

## MINI QUIZ

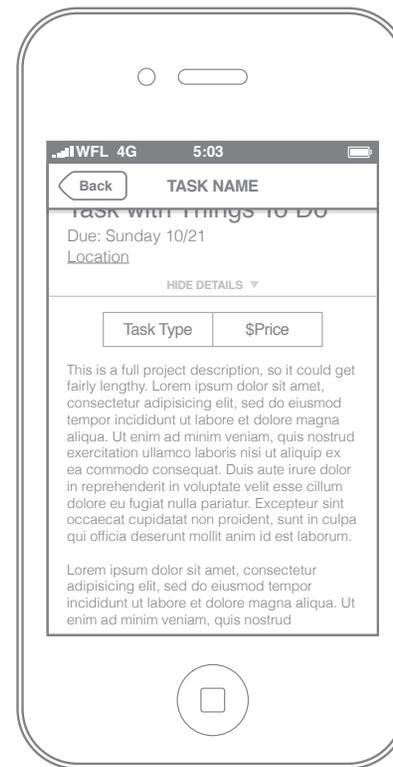

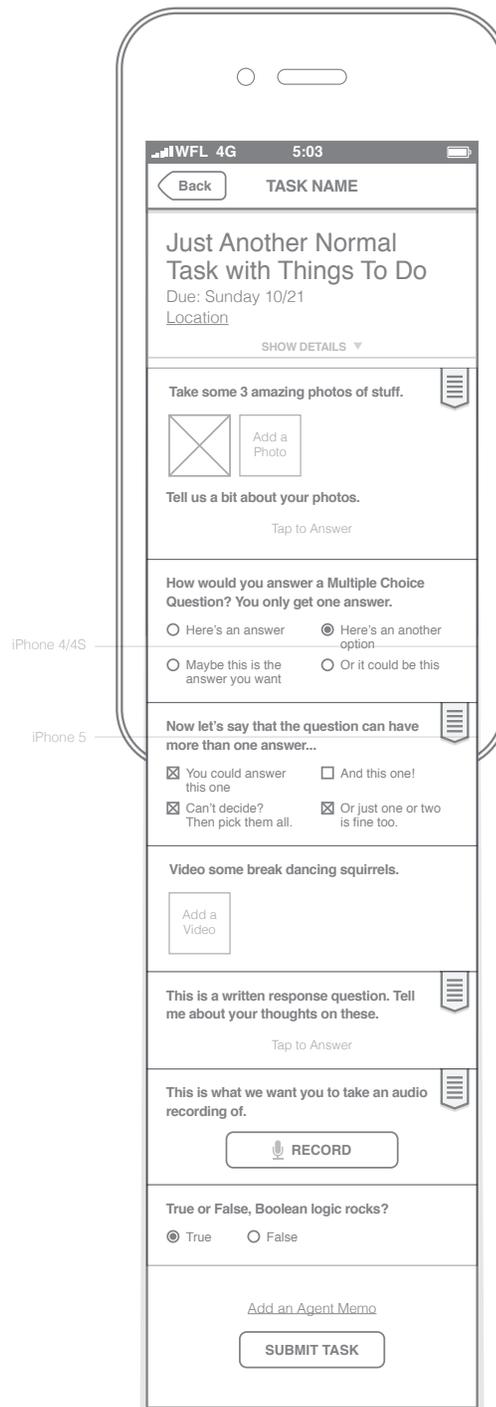

# APPROVED

- Mini quizzes will be made up of single answer, multiple answer, and true and false questions
- The User will be scored immediately and will be required to get 100% of the questions correct.
- The first and second time they do not pass the quiz, the message at the top will change to tell them to look over the quiz and try again. The questions that they got wrong will be highlighted.
- If they do not pass a third time they an overlay message will pop-up telling them to read over the full description again. Upon hitting 'Okay' they will be taken to the Full Description screen.
- If they fail to pass the quiz for the forth time they will receive a nicely written message telling them that the task is being unassigned. Upon hitting 'Okay' they will be taken back to the Assigned Tasks screen.
- The task will be made live again to all other Agents, but will not be seen by the User
- If they do pass, then they will be taken to the task center

# WIREFRAMES

## TASK CENTER

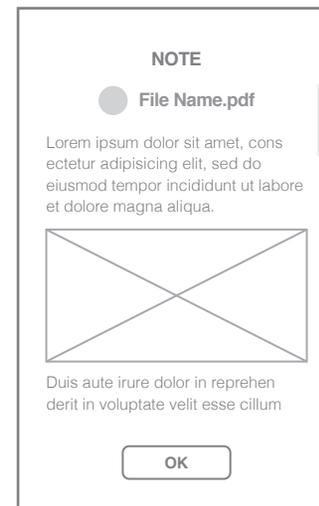

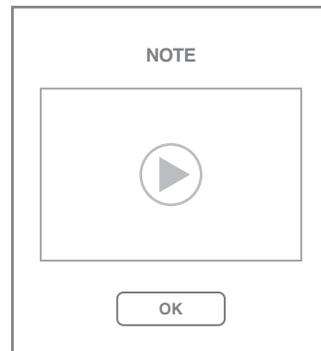

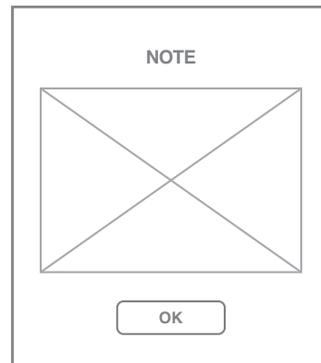

APPROVED

- By Default only basic task information will be seen on the top of the screen. The rest of the information will be viewable by tapping the 'show details' bar. (Expanded view on right)
- If the task is, or becomes urgent then it will be marked (see New Task Detail page)
- The task can have single answer, multiple answer, true or false, or written response questions.
- It can also include media requests, such as taking photos, shooting video or recording audio.
- If the organizer has supplied more information (via an embedded message block) about a question or media request then an info icon will appear with that block. UI is to make sure the icon is intuitive, prominent and the messages are easily accesses.
- Users can add or review notes about to the project in the memos section.

# WIREFRAMES

## TASK CENTER - INFO OVERLAYS

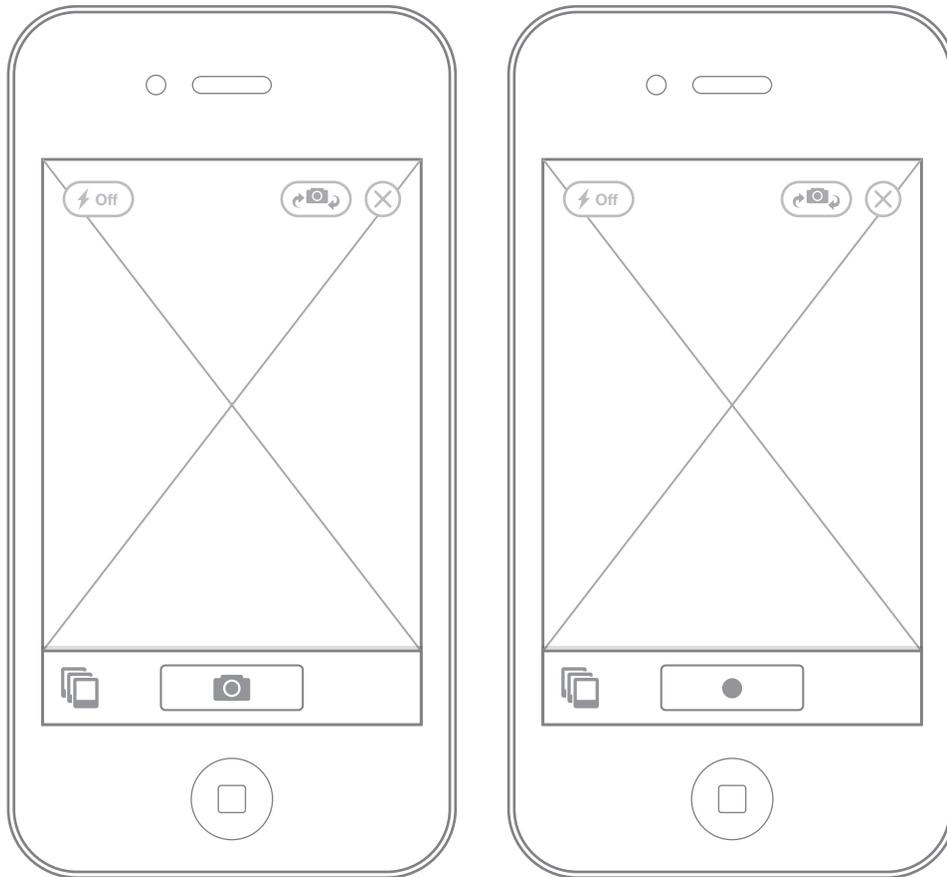

# APPROVED

- If the Question or Media Request has an info icon, then an overlay will come up when it is tapped.
- Info messages can be text, images, video, audio or a PDF.
- Text appears normally.
- Images will appear in the overlay. When tapped, the image will go full-screen.
- Video could either be embedded (going full screen when the play button is tapped), or it could be a link to an outside URL.
- Audio will have basic playback controls
- PDFs will open in the system's default app.
- Notes can have more than one message type.
- The 'OK' button will close the overlay.

# WIREFRAMES

## TAKE PHOTO / VIDEO

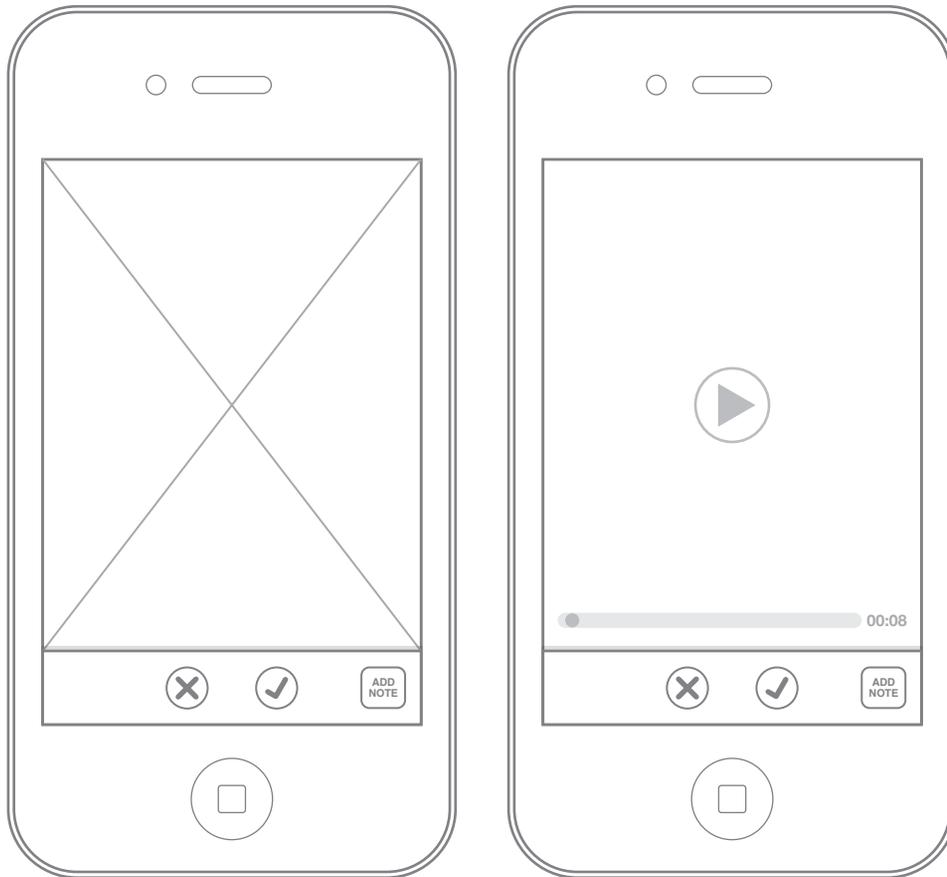

# APPROVED

- Photo and video taking functionality will be similar to that of Instagram.
- There will be the option to control the flash, switch from back to front cameras and cancel.
- If the User taps album icon on the lower left, they can chose an existing image to submit.
- Shutter release and record buttons will function like the native camera app.

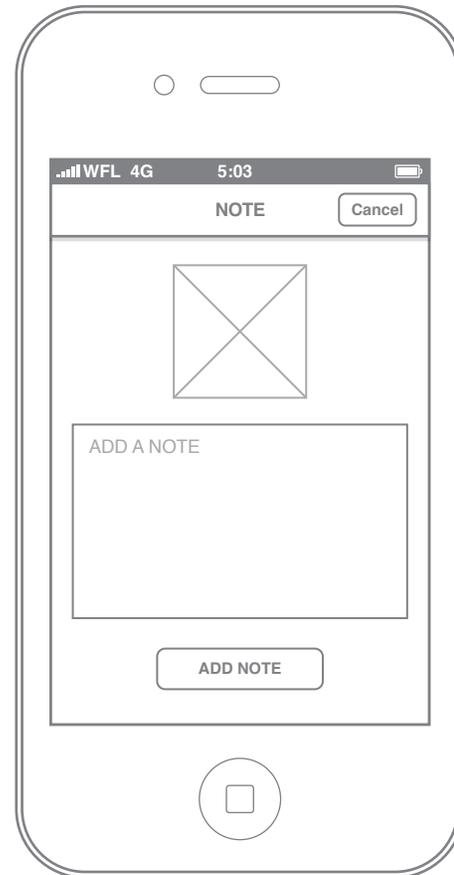

## WIRE FRAMES

TAKE PHOTO / VIDEO

# APPROVED

- Once a picture or video is taken the User can approve or reject it for use.
- Video will also have playback controls so they can review it.
- The User can also add a note to the image or video to add clarification, as requested or desired.

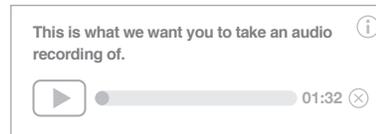

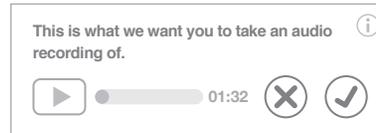

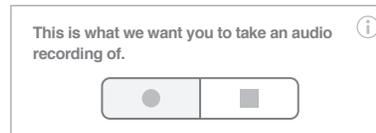

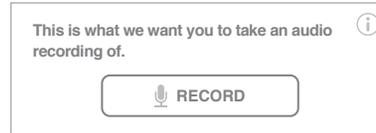

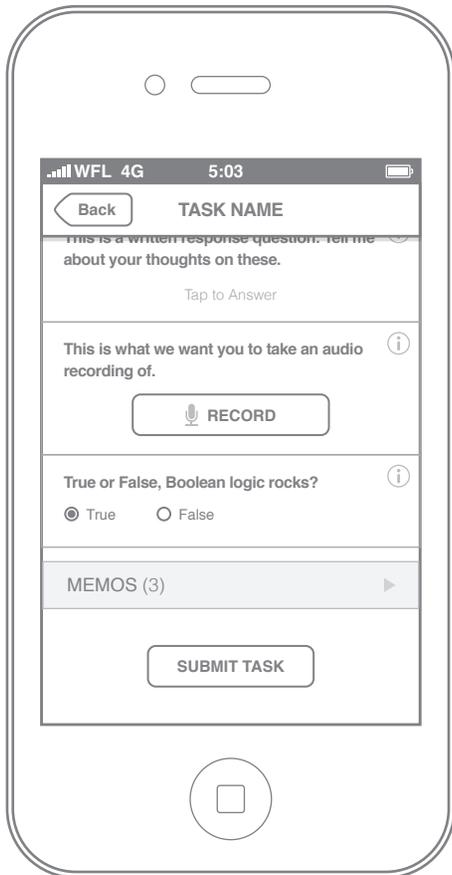

## APPROVED

- When the add note button is tapped the User will be taken to this screen.
- For images, a small thumbnail will be on the top for reference. The image is static.
- Videos will not have a thumbnail.
- Note: This is not a note from the organizer, but a place where the Agent can add extra information about the photo or video if they think that it needs an explanation. If the organizer wants to request more info then they can add a message telling the Agent what to tell them in the note. Or, better yet, they can create a written answer question about it.

# WIREFRAMES

## AUDIO REQUEST

# APPROVED

- If the User is asked to record audio then there will be a 'Record' button in that block.
- When the User taps the button recording will begin and the button will split into 'pause' and 'stop' buttons.
- If they tap 'pause' then recording will pause and that button will switch to a 'resume' button, which will continue recording when tapped.
- If the User taps 'stop' then the recording session is over and they will be given playback tools and the option to accept or reject the recording.
- Accepting the recording will leave the playback controls and submit the audio.
- Rejecting the recording will erase it and return the block to its original state.
- The User can delete an accepted recording by tapping the delete icon next to the playback controls. Tapping this will bring up a confirmation system pop-up and return the block to its original state if it is confirmed.

## WIRE FRAMES

### ADD AN AGENT MEMO

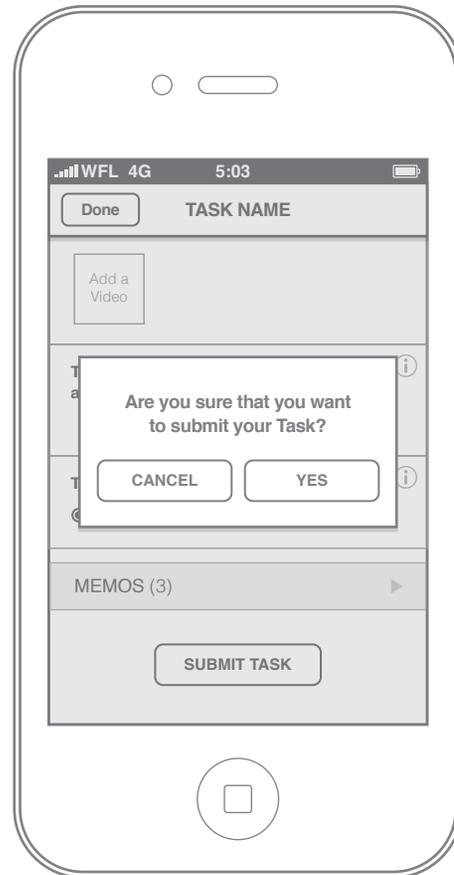

# APPROVED

- The Agent Memo screen gives the Agent a place to communicate with the Organizer in order to explain unknown situations, problems or recommendations.
- Adding an Agent Memo is not mandatory to submit the task.

# WIRE FRAMES

## SUBMIT TASK

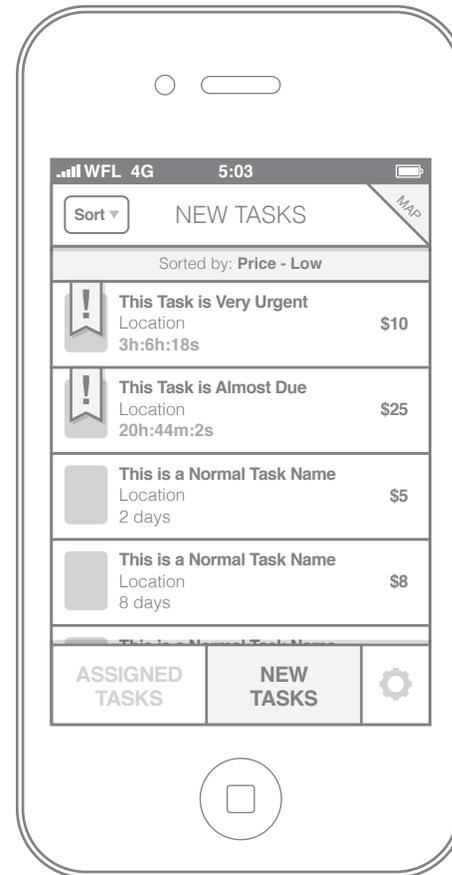

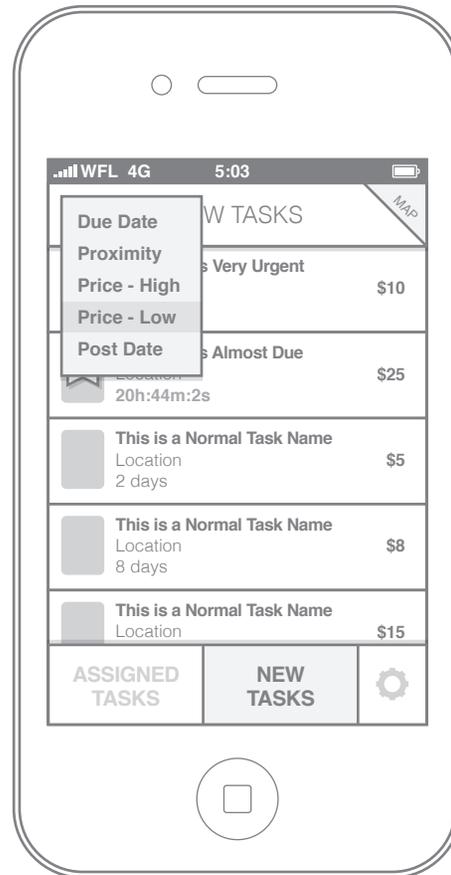

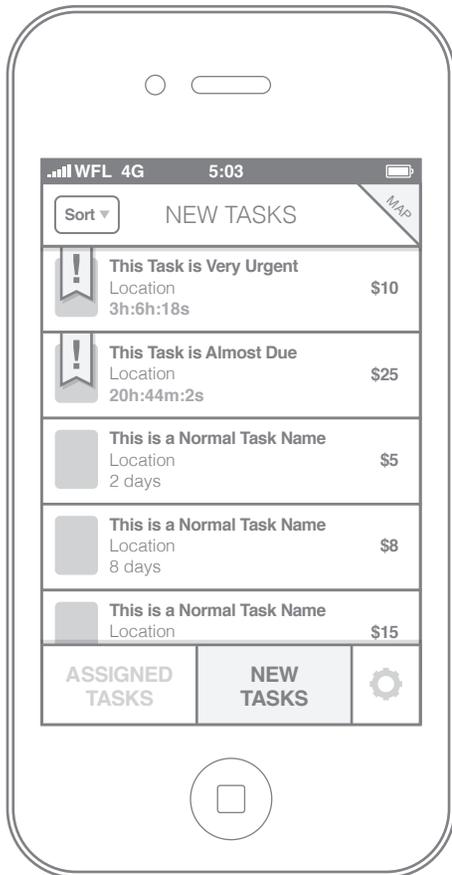

# APPROVED

- When the User has completed the task, they will hit the 'Submit Task' button.
- Even though the information has been passively sent to the system all along, the User must verify that they are done to mark the task as complete in the system.

# WIREFRAMES

## NEW TASKS: LIST VIEW

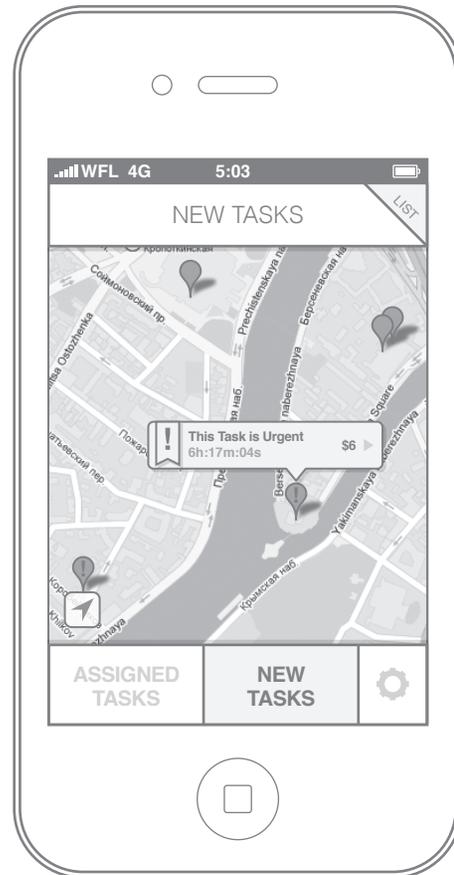

# APPROVED

- The list view in New Tasks will function the same as Assigned Tasks
- Unlike the Assigned Task page, this screen will have a sort feature.
- If the User chooses to sort the list then the current 'sort by' setting will be added to the top of the list.
- Urgent tasks will be marked accordingly.
- Any unclaimed tasks due in 2 days or less will be marked as Urgent.
- If the User is on any other screen and a new Urgent task becomes available than an urgent notification will appear over the New Task area. Once the User enters the New Tasks screen the notification will be removed.

# WIRE FRAMES

## NEW TASKS: MAP VIEW

# APPROVED

- The New Tasks map view will function the same way as the Available Tasks section.

# WIRE FRAMES

## NEW TASK DETAIL

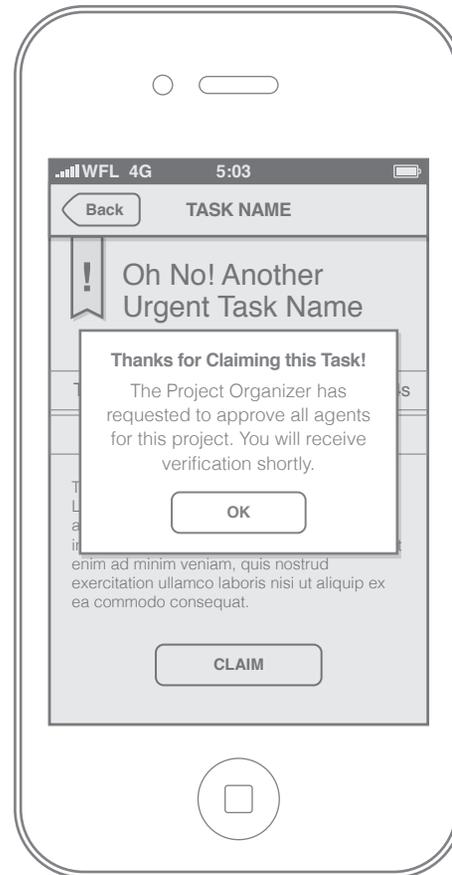

# APPROVED

- If the Task is Urgent then it will be marked accordingly.
- The Location name is live and links to a full-screen map.
- Any of the info (task type, questions, etc.) that can be put into iconic form should be.
- Because task descriptions can get rather long they will be truncated to around 7 lines, with a 'show all' button that will expand the text when tapped.
- There will be no way to collapse the description when it is expanded because it is not necessary in this situation.
- If the User wants to claim the task they just hit the button and they will be taken to the Full Task Details screen.

# WIREFRAMES

## NEW TASK CLAIM RESPONSE

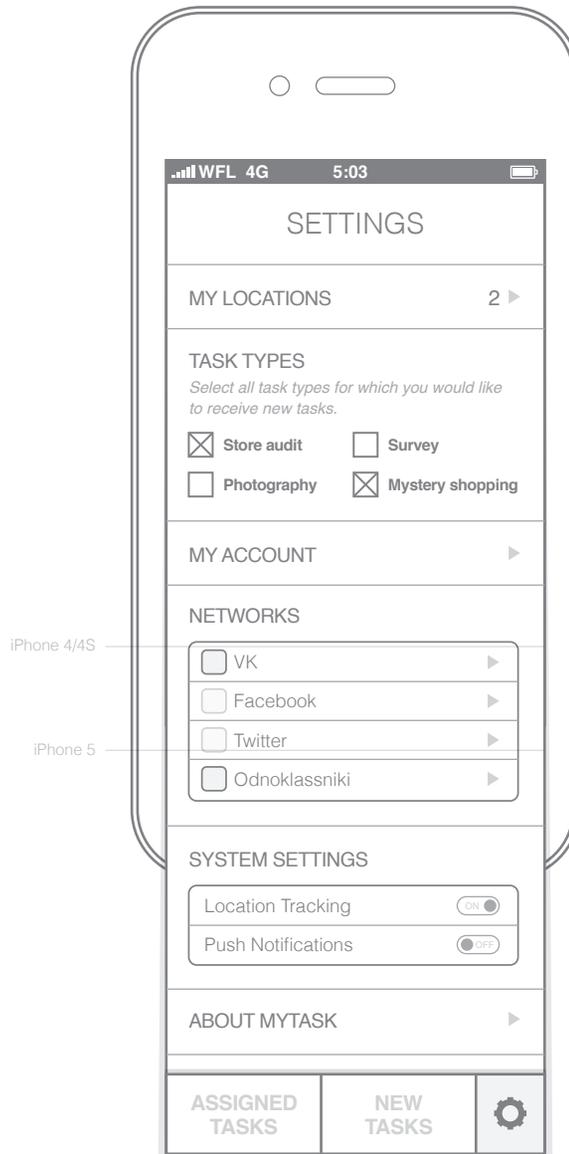

# APPROVED

- Most tasks are instantly claimed, but the Organizer can request to approve all agents for a task.
- When an User claims this type of task they will be given a message explaining it.
- Tapping 'OK' will take them back to the New Tasks screen.
- Tasks awaiting approval will appear in the Assigned Tasks screen, but will be labeled and detail screens will not be available until approved.
- After the organizer has approved them as an agent they will be sent an email informing them of the assignment and the task label will be cleared in the Assigned Tasks list.

# WIREFRAMES

## SETTINGS

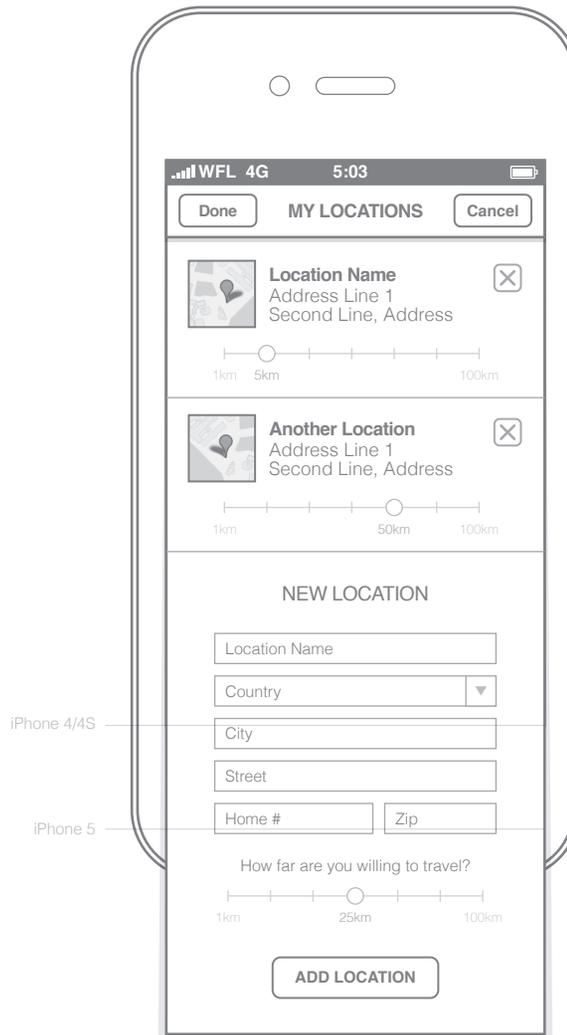

# APPROVED

- The User can see how many locations they have, but will need to tap on the link to slide over and edit/add more.
- All task types will be checked by default.
- The User can see what networks they have connected to MyTask (via the icon next to the name). They can also access network setting individually for more control and to disconnect from the network.
- Tapping on a network that is not connected will take them to the 3rd party system to do that.
- System settings will need to be linked to the iOS' respective settings so they turn on and off here when changed in the phone settings, and vice versa.

# WIREFRAMES

## SETTINGS - EDIT LOCATIONS

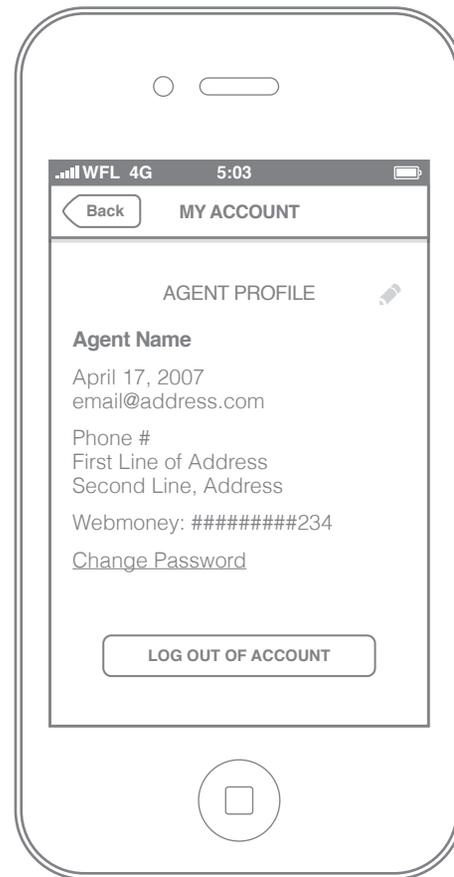

# APPROVED

- Users can change the task range for all locations at any time.
- To keep things simple, though, if they want to edit an address for any reason, the User will need to delete that location and add a new one.

# WIRE FRAMES

## SETTINGS - ACCOUNT

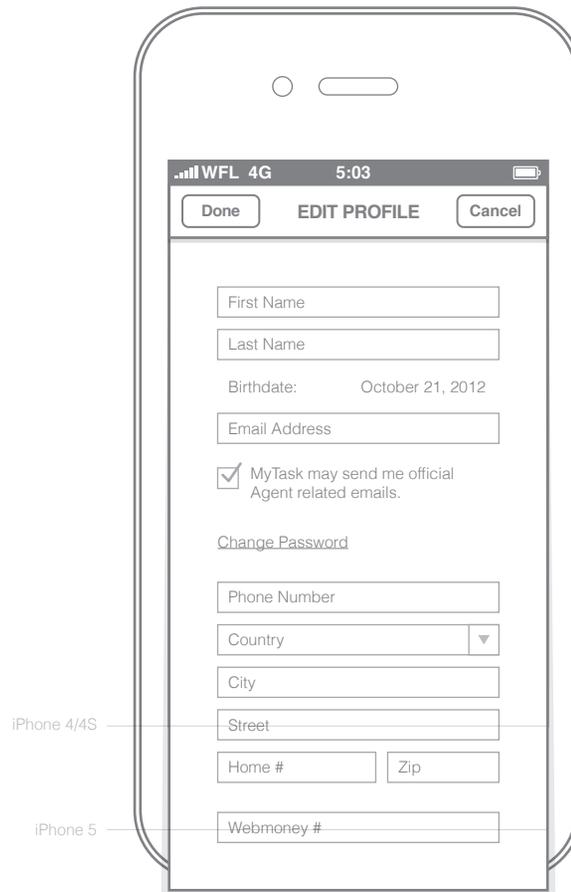

# APPROVED

- The User can edit their profile by tapping on the edit icon in the top left of that area.
- The Webmoney # will only display the last 3 digits of their number, similar to how credit cards are often handled.
- When the User taps the 'Log Out of Account' button they will be taken to the Sign-in screen.

# WIRE FRAMES

## SETTINGS - EDIT PROFILE

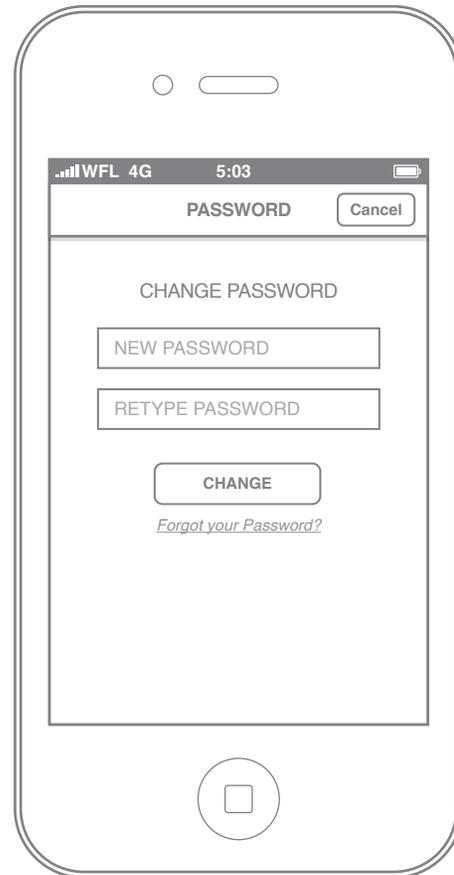

# APPROVED

- The User can edit anything in their profile except their birth date.
- All fields will be filled with the info they already supplied during registration.
- When they tap on a field it will bring up the keyboard and allow them to replace the info.
- The 'Change Password' link will take the user to the that screen.

# WIREFRAMES

## SETTINGS - CHANGE PASSWORD

# APPROVED

- When the User changes their password they will be sent an email telling them that the change has taken place and to contact support if they were not the one to have made the change.

# WIRE FRAMES

## SETTINGS - ABOUT MYTASK

# APPROVED

- We don't really know at this point what will be included in this page, but it will be a fairly generic template to allow easy updates.
- UI should include dummy copy at this point.

THANK YOU
